***Claim Rejections – 35 U.S.C. § 103***

The Examiner has rejected Claims 2-5, 7-11, 14-17, 19, 21, and 23-48 under 35 U.S.C. § 103(a) as being unpatentable over Llanos et al. (US 6,746,773). Applicants respectfully disagree.

The Examiner states that “Llanos discloses coating composition and method of coating medical composition with the coating composition where a first layer is top coated with a top coating layer; both layers contain polymer and drugs.” The Examiner further states that “it would have been obvious to one of ordinary skill in the art at the time of the invention was made to coat a medical device with a coating composition that contains drug and polymer top-coat the initial-layers with a composition that contains drug, polymer and gold as disclosed in Llanos.”

Claims 5, 8, 9, 15, 19, 26, 28, 33, and 46 recite the feature “wherein the light- and/or UV-protective compound has no or substantially no therapeutic effect.” Llano et al. disclose coatings having therapeutic and pharmaceutical agents such as “gold compounds (auranofin, aurothioglucose, gold sodium thiomalate).” (col. 9, lines 23-24). The gold compounds have therapeutic and pharmaceutical effects on the human body that treats rheumatoid arthritis. ([www.medlineplus.gov](http://www.medlineplus.gov)) Metallic gold is an example of a material that does not have a therapeutic or pharmaceutical effect on the human body that treats a condition such as rheumatoid arthritis. Llanos et al. does not teach or suggest a coating including a light- and/or UV-protective
